<b>1</b>	<b>nanslice package</b>	<b>3</b>
1.1	Submodules . . . . .	3
<b>2</b>	<b>Indices and tables</b>	<b>5</b>
<b>3</b>	<b>Legal</b>	<b>7</b>

(Alternative names are Not-A-Number Slice tool & Neuroimaging ANalysis Slice tool)

This is a pure Python module for taking slices through MR Images and displaying them in beautiful ways. It is friendly to both clinical and pre-clinical data, and includes dual-coding (<http://dx.doi.org/10.1016/j.neuron.2012.05.001>) overlays.

Along with a Python module that can be used in your Python scripts, there are several utility functions for use in Jupyter notebooks, including a three-plane viewer. There are also three command line tools that will be installed to your \$PATH:

- `nanslicer` Produces different kind of slice-plots including color bars
- `nanviewer` A three-plane viewer. Requires PyQt.
- `nanvideo` Converts time-series images to a movie file for easy viewing.

## 1.1 Submodules

1.1.1 nanslice.box module

1.1.2 nanslice.jupyter module

1.1.3 nanslice.layer module

1.1.4 nanslice.nanslicer module

1.1.5 nanslice.nanvideo module

1.1.6 nanslice.nanviewer module

1.1.7 nanslice.slice\_func module

1.1.8 nanslice.slicer module

1.1.9 nanslice.util module

## CHAPTER 2

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`

## CHAPTER 3

---

Legal

---
